Davienne Monbleau

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments are unpersuasive. Applicant's arguments rest on the alleged deficiency of the combination of Funakubo in view of Watanabe. Applicant contends that Watanabe fails to disclose a "means for causing displacement . . . responsive to the application of a bias voltage of 100 volts or less." However, Watanabe specifically discloses operating actuators of a stage by applying rectangular waves with an amplitude of 2 volts. See column 10, lines 5-21. The fact that Watanabe uses the term "high voltage" or contemplates applying voltages outside the claimed range does not discard the above teaching. Additionally, the portions of Watanabe cited by Applicant which teach applying a 1kV voltage are not directed to operation of the stage but rather to the discussion of the quality of the actuators. Furthermore, Examiner's Final Rejection also stated that the "application of a bias voltage of 100 volts or less" was well known in the art. Applicant failed to address this rejection. Accordingly, the rejection stands as proper.
